

Planets

By Aidan Roberts

Hi, I am Aidan and my favourite topic is planets. I like this topic because it is very interesting and you learn lots of stuff. Our solar system is the Milky Way. We have 9 planets in the Milky Way but 1 has been made a dwarf planet. That means it is not a real planet.

SOURCE: THE INTERNATIONAL ASTRONOMICAL UNION/MARTIN KORNMESSER

Here are a few of my favourite facts.

Uranus: 32,000 miles, 27 moons

Pluto: size (diameter)/1370 miles/2200km, 3 moons

Venus: size 7521 miles 0 moons

Jupiter: size 88,200 miles /142,000km
