Tech according to Matthew

2011 brings new tech in to our world with the realise of Kinect and the upcoming release of the ipad 2 and iphone5. Don't forget about the other phones like the Sony e+ricsson xperia mini pro which my brother got as a new phone about a week ago.

Also the new realises of video games, such as Call Of Duty for older people and Need For Speed Hot Pursuit for us.

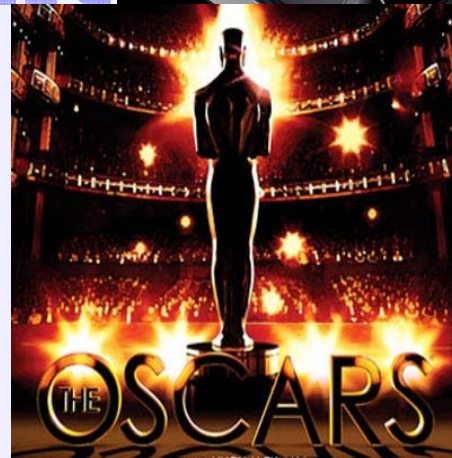

Movies hit a jackpot this year with PAUL(15), The King's Speech (12), Black Swan(15) and The fighter (15), and the Baftas and Oscars were a success, Black Swan and The King's Speech won most of the awards.

The Nintendo Wii has already had its fair share of accessories. The latest the uDraw GameTablet is a little different. It's a drawing tool equipped with a stylus, powered by a Wii Remote so that you can play all sorts of motion sensor-enabled games with it. This would be good because you don't need a pen or paper.
